NOTE TO THE READER	1
LIST OF PARTICIPANTS	3
PREAMBLE.....	7
A. GENERAL PRINCIPLES AND PROCEDURES	7
1. Background.....	7
2. Objective and scope.....	8
3. Selection of agents for review	9
4. Data for the <i>Monographs</i>	9
5. Meeting participants.....	10
6. Working procedures.....	11
B. SCIENTIFIC REVIEW AND EVALUATION.....	12
1. Exposure data	13
2. Studies of cancer in humans	14
3. Studies of cancer in experimental animals.....	18
4. Mechanistic and other relevant data.....	21
5. Summary.....	24
6. Evaluation and rationale.....	25
References	29
GENERAL REMARKS.....	31
SOLAR AND ULTRAVIOLET RADIATION	35
1. Exposure Data	35
1.1 Nomenclature and units.....	35
1.2 Methods for measuring UVR	36
1.3 Sources and exposure.....	36
2. Cancer in Humans.....	40
2.1 Natural sunlight.....	40
2.2 Artificial UV radiation	48
2.3 UVA, UVB, and UVC	52
2.4 Synthesis.....	61
3. Cancer in Experimental Animals	63
3.1 Non-melanoma skin cancer.....	64
3.2 Melanoma	70
3.3 Synthesis.....	78

4. Other Relevant Data	78
4.1 Transmission and absorption in biological tissues	78
4.2 Genetic and related effects: consequences of UVR exposure	79
4.3 Genetic susceptibility: host factors modulating the response to UV	84
4.4 Other effects	87
4.5 Synthesis	89
5. Evaluation	90
References	90
X- AND γ-RADIATION	103
1. Exposure Data	103
1.1 Physical properties	103
1.2 Interactions with matter	106
1.3 Exposure	113
2. Cancer in Humans	125
2.1 Detonation of atomic bombs	126
2.2 Fallout from nuclear weapons testing	129
2.3 Medical exposures	130
2.4 Occupational studies	132
2.5 Environmental studies	135
2.6 Synthesis	136
3. Cancer in Experimental Animals	168
3.1 Previous evaluation	168
3.2 Studies published since the previous <i>IARC Monograph</i>	169
3.3 Studies in adult animals	169
3.4 Prenatal exposure	179
3.5 Neonatal exposure	179
3.6 Parental exposure	180
3.7 Synthesis	180
4. Other Relevant Data	181
4.1 Radionuclides: determining the distribution of dose	181
4.2 Mechanisms of carcinogenesis induced by all ionizing radiation	194
4.3 Mechanism of carcinogenesis of neutrons: an example of ionizing radiation	207
4.4 Synthesis	209
5. Evaluation	210
References	210
NEUTRON RADIATION	231
1. Exposure Data	231
2. Cancer in Humans	231
3. Cancer in Experimental Animals	232
3.1 Previous <i>IARC Monograph</i>	232
3.2 Carcinogenicity in adult animals	233
3.3 Prenatal exposure	237
3.4 Synthesis	237
4. Other Relevant Data	237

5. Evaluation	237
References	237
INTERNALIZED α-PARTICLE EMITTING RADIONUCLIDES	241
1. Exposure Data	241
2. Cancer in Humans.....	241
2.1 Radon	241
2.2 α -Particle emitters.....	250
3. Cancer in Experimental Animals	264
3.1 Previous <i>IARC Monograph</i>	264
3.2 Studies published since the previous <i>IARC Monograph</i>	265
3.3 Other studies.....	274
3.4 Synthesis.....	274
4. Other Relevant Data	274
5. Evaluation	274
References	275
INTERNALIZED β-PARTICLE EMITTING RADIONUCLIDES	285
1. Exposure Data	285
2. Cancer in Humans.....	285
2.1 Pure β -particle emitters.....	285
2.2 Mixed exposures.....	287
2.3 Mixed β -particle emitters–radioiodines.....	289
2.4 Synthesis.....	293
3. Cancer in Experimental Animals	294
3.1 Previous evaluation	294
3.2 Pure β -particle-emitting radionuclides.....	295
3.3 Mixed β -particle emitting radionuclides	296
3.4 Synthesis.....	297
4. Other Relevant Data	297
5. Evaluation	297
References	298
LIST OF ABBREVIATIONS	305
CUMULATIVE CROSS INDEX TO <i>IARC MONOGRAPHS</i>.....	309

NOTE TO THE READER

The term ‘carcinogenic risk’ in the *IARC Monographs* series is taken to mean that an agent is capable of causing cancer. The *Monographs* evaluate cancer hazards, despite the historical presence of the word ‘risks’ in the title.

Inclusion of an agent in the *Monographs* does not imply that it is a carcinogen, only that the published data have been examined. Equally, the fact that an agent has not yet been evaluated in a *Monograph* does not mean that it is not carcinogenic. Similarly, identification of cancer sites with *sufficient evidence* or *limited evidence* in humans should not be viewed as precluding the possibility that an agent may cause cancer at other sites.

The evaluations of carcinogenic risk are made by international working groups of independent scientists and are qualitative in nature. No recommendation is given for regulation or legislation.

Anyone who is aware of published data that may alter the evaluation of the carcinogenic risk of an agent to humans is encouraged to make this information available to the Section of IARC Monographs, International Agency for Research on Cancer, 150 cours Albert Thomas, 69372 Lyon Cedex 08, France, in order that the agent may be considered for re-evaluation by a future Working Group.

Although every effort is made to prepare the *Monographs* as accurately as possible, mistakes may occur. Readers are requested to communicate any errors to the Section of IARC Monographs, so that corrections can be reported in future volumes.
