## CONTENTS

**NOTE TO THE READER** .................................................................................................................. 1

**LIST OF PARTICIPANTS** ................................................................................................................... 3

**PREAMBLE** ........................................................................................................................................ 9
  A. GENERAL PRINCIPLES AND PROCEDURES .............................................................................. 9
     1. Background ............................................................................................................................ 9
     2. Objective and scope ................................................................................................................ 10
     3. Selection of agents for review .............................................................................................. 11
     4. Data for the *Monographs* ................................................................................................... 12
     5. Meeting participants ............................................................................................................. 12
     6. Working procedures .............................................................................................................. 13
  B. SCIENTIFIC REVIEW AND EVALUATION ................................................................................ 14
     1. Exposure data ........................................................................................................................ 15
     2. Studies of cancer in humans ................................................................................................ 16
     3. Studies of cancer in experimental animals ........................................................................... 20
     4. Mechanistic and other relevant data .................................................................................... 23
     5. Summary ................................................................................................................................ 26
     6. Evaluation and rationale ...................................................................................................... 27
     References ................................................................................................................................... 31

**GENERAL REMARKS** .................................................................................................................... 33
  1. Exposure Data .......................................................................................................................... 35
     1.1 Definition of outdoor air pollution ....................................................................................... 35
     1.2 Sources of air pollutants ..................................................................................................... 43
     1.3 Outdoor air pollution measurement methods .................................................................... 50
     1.4 Environmental occurrence and human exposure ............................................................... 52
     1.5 Guidelines and regulations .................................................................................................. 113
     References ................................................................................................................................... 115
  2. Cancer in humans ........................................................................................................................ 135
2.1 Cancer of the lung ................................................................. 135
2.2 Cancer of the urinary bladder ............................................. 188
2.3 Cancer of the breast ......................................................... 195
2.4 Haematological malignancies: leukaemia and lymphoma ............ 204
2.5 Childhood cancer .............................................................. 213
2.6 All cancers combined and cancers of other sites ......................... 244
References ................................................................. 245

3. Cancer in Experimental Animals ............................................ 255
  3.1 Studies of components of outdoor air pollution in previous IARC Monographs .................. 255
  3.2 Inhalation studies of exposure to outdoor air .................................. 281
  3.3 Non-inhalation studies of exposure to outdoor air ......................... 286
References ................................................................. 304

4. Mechanistic and other relevant data ....................................... 309
  4.1 Toxicokinetic data .......................................................... 309
  4.2 Genetic and related effects .................................................. 311
  4.3 Other data relevant to carcinogenicity .................................... 383
  4.4 Susceptible populations ...................................................... 396
  4.5 Mechanistic considerations ................................................. 397
References ................................................................. 403

5. Summary of Data Reported ................................................... 431
  5.1 Exposure data .............................................................. 431
  5.2 Human carcinogenicity data ............................................... 434
  5.3 Animal carcinogenicity data ............................................... 437
  5.4 Mechanistic and other relevant data ..................................... 438

6. Evaluation ........................................................................ 443
  6.1 Cancer in humans ............................................................ 443
  6.2 Cancer in experimental animals .......................................... 443
  6.3 Overall evaluation .......................................................... 443

LIST OF ABBREVIATIONS .......................................................... 445
NOTE TO THE READER

The term ‘carcinogenic risk’ in the IARC Monographs series is taken to mean that an agent is capable of causing cancer. The Monographs evaluate cancer hazards, despite the historical presence of the word ‘risks’ in the title.

Inclusion of an agent in the Monographs does not imply that it is a carcinogen, only that the published data have been examined. Equally, the fact that an agent has not yet been evaluated in a Monograph does not mean that it is not carcinogenic. Similarly, identification of cancer sites with sufficient evidence or limited evidence in humans should not be viewed as precluding the possibility that an agent may cause cancer at other sites.

The evaluations of carcinogenic risk are made by international working groups of independent scientists and are qualitative in nature. No recommendation is given for regulation or legislation.

Anyone who is aware of published data that may alter the evaluation of the carcinogenic risk of an agent to humans is encouraged to make this information available to the Section of IARC Monographs, International Agency for Research on Cancer, 150 cours Albert Thomas, 69372 Lyon Cedex 08, France, in order that the agent may be considered for re-evaluation by a future Working Group.

Although every effort is made to prepare the Monographs as accurately as possible, mistakes may occur. Readers are requested to communicate any errors to the Section of IARC Monographs, so that corrections can be reported in future volumes.
